[#NATO](#) is playing both sides as a well known part of their members instruction materials. [#Russia](#) is playing along or getting played. They are just robbing the US blind, essentially.

b. Maintain a dual-track approach to relations with Russia. NATO-Russia relations have reached their lowest point since the end of the Cold War. From Russia's military build-up and the growing number and size of military exercises close to NATO borders to cyber-attacks, disinformation campaigns and the use of chemical weapons on the soil of a NATO Ally, the list of NATO's grievances with Russia keeps growing. This behaviour compels NATO to **reinforce its defence and deterrence posture** and do so explicitly, leaving no doubt about its resolve or about Allied unity. The cost of Russian aggression, even below the threshold of armed conflict, must continue to rise. NATO must continue to clearly call out Russia where attribution can be reliably established, and help Allies coordinate on sanctions. By **boosting resilience** in the domains outlined below, the Alliance would further **immunise itself against malign Russian interference**. The Group **endorses NATO's dual-track approach** of deterrence and defence coupled with dialogue. There is a need for **dialogue**, particularly with a view towards military de-escalation and arms control. Measures that promote transparency, risk reduction and predictability are in everyone's interest. **Russia cannot be ignored** when it comes to areas of common interest such as verifiable arms control and confidence building agreements, counterterrorism or the geopolitics of Chinese assertiveness and climate change. NATO should remain open to reviewing its relationship with Russia, if the political environment becomes more favourable and **conditional upon a Russian return to compliance with international law, as well as a change of behaviour in Russia's foreign policy.**

What are Novel Foods ?

A Novel Food remains defined in Regulation (EU) 2015/2283 as a food for which human consumption was negligible in the European Union before 15 May 1997, when the first novel food regulation came into force with Regulation (EC) 258/97.

The sources from which novel foods are derived are plants, animals, microorganisms, cell cultures, minerals, etc. Novel foods may come from specific categories of foods (insects, vitamins, minerals, food supplements, etc.), foods resulting from production processes and advanced practices and technologies (e.g. new or intentionally modified molecular structure, nanomaterials), which were not produced or used before 1997 and can therefore be considered as novel foods.

	<h4>Novel Food Application</h4> <p>Service details Regulatory evaluation of the native ingredient before processing (plant, animal product, other source, etc) in EU Member States that specifically qualify it (positive/negative lists, p...</p> <p>https://www.foodchainid.com/consulting/supplements/novel-food-application</p>

Use Cases

- Mobile payments at retail outlets.
- Wireless charging for multiple devices.
- Keep track of traveller luggage at the airport by using smart tags.
- Monitor air quality of the indoor environment by using BLE-powered sensors.
- Remote monitoring of patient's health conditions
- Autonomous vehicles with intelligent seats and steering wheels, intelligent proximity reporting etc
- Smart Home automation systems with sensors for tracking fire breakouts, water leakages, or motion in case of robbery.

Advantages of Bluetooth Low Energy technology

- Sends an ID number via BLE advertising channels
- The 2.4 GHz frequency controls interference in signals.
- Determines the location of users within its range
- Longer battery life by keeping the radio off when not required
- Uninterrupted broadcast using Bluetooth beacon
- The devices are able to establish connections and faster data transfer.
- Small size (maximum up to 255 bytes) data transfer which is helpful for IoT-based applications
- The 128-bit AES algorithm ensures the safety of data transfer.

O-RAN

Traditionally, mobile network operators relied on network equipment vendors for RAN hardware. Vendors are few in number and their equipment is specialized and expensive. With 4G/5G, small cell deploym...

Deborah Birx's Husband Is Former Clinton 'Advance Man' Paige Reffe

By **S.M. Walsh**
Updated Apr 3, 2020 at 7:37pm

From time to time, Birx discusses her personal life on stage, with references to her husband of many years, former Clinton advance man, Paige Reffe.

Reffe Was the Deputy Assistant & Director of Advance for Bill Clinton

Reffe graduated from both the college and the law school of Emory University. From 2000 to 2002, he served on the Visitor's Board of the United States Airforce Academy.

As the Deputy Assistant and Director of Advance, Reffe was responsible for the execution of the President and First Lady's trips, according to The Project on Transitional Democracies.

Speaking to CBS in 2000, Reffe shared, "From who sits where on the motorcade, to how you communicate the message. They deal with who gets invited to events, who sits on the podium, who speaks and when. They deal with lighting, press filing centers, coordinating with security

Trilateralists in the Bill Clinton Administration (1992-2000) include:

- **Bill Clinton**
- **Al Gore** (Vice President)
- Donna E. Shalala (Secretary of Health and Human Services)
- Alice M. Rivlin (Deputy Budget Director)
- **Madeleine Albright** (UN Ambassador)
- Peter Tarnoff (Under Secretary of State for International Security of Affairs)
- **Warren M. Christopher** (Secretary of State)
- **Ronald H. Brown** (Secretary of Commerce)
- Henry G. Cisneros (Secretary of Housing and Urban Development)
- Bruce Babbitt (Secretary of Interior)
- **Walter Mondale** (U.S. Ambassador to Japan)
- William J. Crowe (Chairman of the Foreign Intelligence Advisory Board)
- **William S. Cohen** (Secretary of Defense)
- **William J. Perry** (Secretary of Defense)
- Lloyd N. Cutler (Counsel to the President)

Trilateralists in the Bill Clinton Administration (1992-2000) include:

- Richard B. Cheney (CFR, Vice President)
- Robert B. Zoellick (CFR)
- Brent Scowcroft (past member)
- Richard N. Haass (CFR)
- Henry A. Kissinger (CFR)
- Stephen J. Friedman (CFR)
- Richard N. Perle (CFR)
- Colin L. Powell (Secretary of State)
- Donald H. Rumsfeld (Secretary of Defense)

Dr. Noack on Graphene's "razor like" properties.

#Pfizer #Moderna #BioNTech #Vaccines #Gates #Fauci #Genocide #SV40 #Oncogene

"...they're using a T7 promoter, an SV40 promoter, an antibiotic-resistance gene, that the replication is bacterial."

Interview: <https://t.co/szQdbNBmPJ>

SV40-In-Bivalent-Vials <https://t.co/Dmcmv7P6aStinyurl.com/ynbna5dh>

SV40 promoters have been studied for years and are known to trigger cancer when encountering an oncogene (a gene that has the potential to cause cancer). What's more, McKernan found that one of the Pfizer vials had not just one but two SV40 promoters.

One of them had a nuclear localization sequence (NLS) that the other didn't have — a 72 base pair insertion for a nuclear localization sequence (NLS) that makes the promoter "much more aggressive and also drives the sequence into the nucleus" of the cell. NLS is basically a sequence that tags a given protein for import into the cell nucleus, and this further heightens the risk of genome integration.

Now, this second, more aggressive promoter was only found in one of the two Pfizer vials tested, even though they were from the same lot. What might account for this remarkable quality discrepancy? At bare minimum, it suggests Pfizer is changing its manufacturing on the fly, without oversight. Changing the plasmid used is a major change in manufacturing that really should require regulatory oversight, McKernan notes.

As for why any of the SV40 promoters are in there, McKernan is certain that it was part of an intentional design, as these promoters have a long research history.

How Might Cinnamycin Resistance Gene Affect Human Health?

Rose and McKernan also discuss how the cinnamycin-resistant gene found in the sequencing vector might impact human health. What happens if this gets into a patient and encounters bacteria? Will it make that bacteria resistant to cinnamycin (a tricyclic antibiotic)?

"While speculative, at the moment, we would assume yes," McKernan says. "Plasmids get absorbed by bacteria at 37 degrees (Fahrenheit) temperature, which is the temperature of your gut ... and if they can confer any selective advantage, then they're going to replicate and become the dominant species in your microbiome."

Possibly, it might require the patient to be on an antibiotic when this occurs, as this is what would give the bacteria the selective advantage. Still, antibiotic use is quite common, so this is not a concern that should be discarded off hand. Potentially, these bivalent jabs may be spreading antibiotic resistance through the injected population, which could have grave consequences.
